

# For beautiful skin...

My own shower has transformed to be a home beauty salon treatment

*Micro bubble*  
**Nano Shower** *Hana*  

## Amazing power to penetrate

It forms microscopic "nano-bubbles" that penetrates deep into the skin pores, creases, hair roots and up to the innermost portion of the skin by utilizing the air in water.

Moreover, the use of cartridge with Activated Carbon Filter (ACF) eliminates residual chlorine that is harmful to hair and skin. The effect is improved moisturizing action, maintaining the moisture balance of the hair, as well as preventing skin roughness.

# For an ideal skin through the moisturizing power of water

Microscopic "nano-bubbles" are formed by utilizing the air in water. These tiny air bubbles produce an amazing cleansing power which makes skin silky smooth and gives hair a lustrous shine.

## Moisturizing power water just like skin lotion

Microscopic "nano-bubbles" with plenty of oxygen penetrates into the topmost layer of the skin gradually. You can realize the moisture effect as your skin becomes moist and its smoothness retains longer. You can feel the moisturizing effect as your skin becomes soft and retains long-lasting smoothness.

## Warm bath effect (Increasing keeping-warm power)

Only 5 minutes of warm bath proves a definite difference. It is very effective in relieving stress and improving sleep, for it stimulates blood circulation as it warms the entire body.

## Powerful cleansing power at microscopic level (Improved cleansing power)

Microscopic "nano-bubbles" smaller than 1.4μm containing plenty of oxygen adheres to the fine dirt particles and washes it out from the body. Even dirt particles and odor (in the skin pores and creases, hair roots, skin cells, and bathtub) which cannot be scrubbed down normally, can be removed without using expensive soaps and cleansing materials, by the microscopic "nano-bubbles" formed with either hot water or tap water only.

## Enhanced water pressure and water-saving effect by water flow adjustment

Even if you use the shower with weak water pressure, water pressure can be enhanced. Just turn around the top of a shower head and you can enjoy the three types of water flows, "normal", "massage" and "jet" easily. Moreover, you can save water by approximately 50% by changing the water flow. In this case, we calculate the water consumption charge based on JPY 0.2/minute and 8 liter(\*), we can save the amount of JPY 16, 128 annually. Taking a shower by using our shower is very friendly to the household budget and the environment.

(\*Water charge stated above is calculated based on the consumption per year of four-member family in Japan.

## Chlorine-free, Mild water (Improved moisturizing effect)

The Activated Carbon Filter (A.C.F.) of the filtering media in the cartridge absorbs residual chlorine and removes it from the water. This improved the moisturizing power of water, maintaining the moisture balance in hair, and preventing skin roughness. One (1) cartridge is usable for 15,000 liters and it is good for up to 6 months for 60 liters water consumption/ day.

Micro bubble Nano Shower HANA

- Recommended retail price : JPY ¥24,800 (Excluded tax)
- Color/Main body casing Black · Wine Red · White · Pink Silver (4 types)

### Replacement Cartridge (Sold separately)

- JPY ¥3,800 (Excluded tax)

**1 tube per 15,000 liters. For 60 liters water consumption/day, it is good for up to approximately 6 months.**

### Micro Bubble Nano shower "HANA=Gorgeousness" Product Specification

Product name	Micro Bubble Nano shower "HANA"
Shower main body material	ABS resin, stainless SUS304
O Ring	EPDM
Filtering media used	Activated carbon
Main Body casing size	approx. 90mm W x 280mm L
Weight	approx. 200g
Chlorine removal capability	15,000 Liters (may differ among region)
Cartridge replacement	approx., After six (6) months
Usable temperature	5°C to 60°C
Minimum water pressure to form micro bubble	6 liters/ min.
Recommended usable environment	Min 0.1 Mpa Water pressure 8 liters/min.
Attachment	Three (3) pieces of adapters
Made in Japan	

**Installation of a main body and replacement of a cartridge is so easy and simple! No need for tools!**

- Please check the hand shower manufacturer you use at present. The need for adapters may vary depending on the manufacturers.

Possible to install a shower head without an included adapter	need an included adapter in installing a shower head
TOTO. INAX. KAKUDAI. SANEI	KVK. GASTAR. MYM

- It is easy to install a shower head after unfastening the existing shower head.  
※ You can install the shower head without an adapter in the case of applicable manufacturers.

#### Important (main body and cartridge)

- You cannot use tap water non-conforming to the Water Supply Law.
- There is a difference in level of chlorine removal capability depending on the water source (water quality) in different areas.
- Standard life-span of a cartridge is based on the quantity standard when concentration reaches 0.3ppm(50%).
- We recommend you to use the water at a temperature of less than 36°C to avoid burn injury.(We do not take responsibility for all the issues in the case that you get burn injury by using the product with water temperature of more than 36°C)
- Please avoid using the product above water temperature of 60°C as the internal gasket is deteriorated quickly and might leak fluid from the gasket.
- Recommended for water pressure above 0.1Mpa in shower head inlet.
- In some cases of using the product at condominium buildings, etc, water pressure and water quantity may decrease. We recommend you to remove the cartridge to increase water quantity.
- In some cases remaining water may flow out of the shower head after you stopped it. Please stop the water flow after turning to the center of three staged changeover switch.
- Regarding cartridge replacement, please change the existing cartridge within one year or when the cartridge is broken due to the foreign materials.
- Design and specification are subject to change without notice in order to improve them.

- Period of guarantee...one (1) year
